

Organic Cleaner

THE INSTALLER FRIENDLY CLEANER OF THE DECORATION INDUSTRY

The Organic Cleaner products have been developed to assure the least exposure to harmful chemicals of our fellow installers. Most cleaners in the industry have vast percentage of isopropyl alcohol (IPA) among their ingredients, our aim when developing the Organic Cleaner family was to find a much more installer friendly solution for cleaning. In the Organic Surface Cleaner and Film Cleaner you will find mostly Ethanol instead of IPA, a natural ingredient, having way less negative effects on your health, while still granting robust cleaning benefits.

	ETHANOL	ISOPROPYL ALCOHOL
PHYSIOLOGICAL EFFECTS	A slightly toxic substance with effects occurring mainly when consumed.	Can have toxic effects when consumed, through the skin and by inhalation as well.
PRODUCTION AND ENVIRONMENT PROTECTION	Traditionally produced by adding yeast to sugar-containing solutions.	Produced from propylene obtained from petroleum or natural gas.

ORGANIC SURFACE CLEANER

A concentrated surface cleaner with high ethanol content for removing severe contamination. Evaporates quickly leaving a perfect surface prior to installation.

ORGANIC FILM CLEANER

A 1:1 diluted version of the concentrate, mainly used for cleaning the film surface after installation or to clean surfaces prior to wet application. Perfectly enough cleaning power, while even better for your health and the environment.

Organic Cleaner. Well being. Sustainability.
